

ERRORS

1. In file e2e/tests/login.test.ts test «login with wrong email format credentials read data from fixture» fails because actual result «Invalid email address.» doesn't match expected result «Invalid email addresssss.» in test.

```
1) Login Functionality
   login with wrong email format credentials read data from fixture:

    Timed out retrying after 5000ms
    + expected - actual

    -'Invalid email address.'
    +'Invalid email addresssss.'
```

2. In file fixtures/users.json in the block “invalid_crededentials”, “wrong_email_format”, for test data uses not only incorrect email, but also incorrect password, so testcase with this credentials doesn't indicate exactly what the system reacts to.

3. In file package.json script “report” doesn't work correct and generates empty allure report.

```
> Debug
"scripts": {
  "cy:e2e:run": "npm run clear && npm run cy:run && npm run report",
  "cy:open": "cypress open --config-file config/config.config.ts --env allure=true",
  "cy:run": "cypress run --config-file config/config.config.ts --env allure=true",
  "report": "npx allure generate reports/ui/allure-results --clean -o reports/ui/allure-report && allure open reports/ui/allure-report",
  "allure:generate": "npx allure generate allure-results --clean",
  "clear": "rm -r reports/** || true"
},
```

If it change to this, it will work correct.

```
"report": "npx allure generate allure-results --clean -o allure-report && allure
open allure-report"
```

COMMENTS

1. File e2e/tests/myAccount.test.ts doesn't have any test, so it should be removed
2. In README at “Steps to run” doesn't clearly describe what means by “Change "Username" and "Password"”
3. In test files should be empty rows between “it” blocks, so it would be more readable
4. Pages folder should be on the same level with e2e folder
5. All assertions should be in the test files, not in page object methods

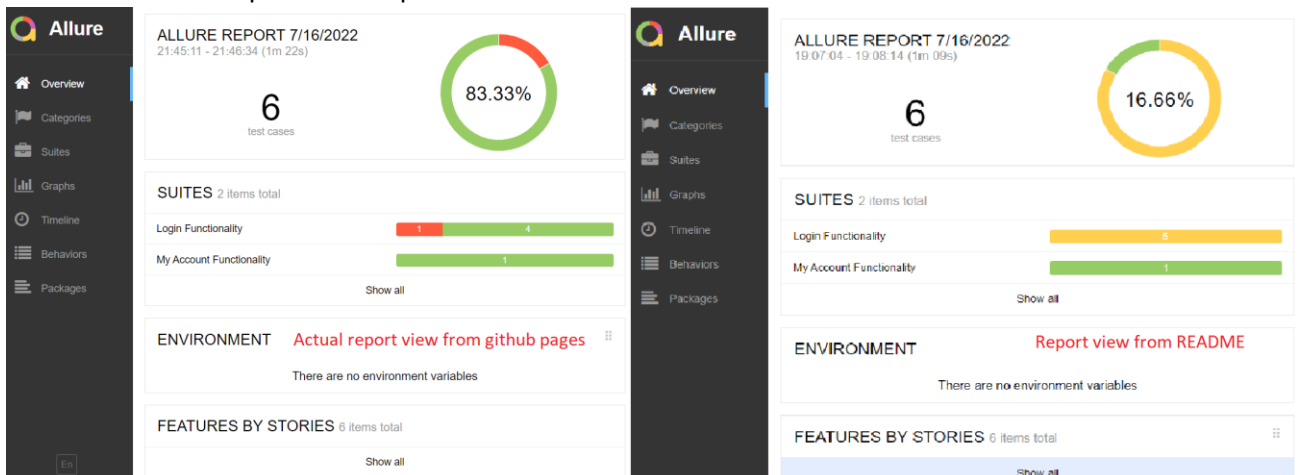

```

loginPage.ts
12 cy.visit('/')
13
14
15 public login(emailId: string, password: string) {
16   this.signInLink.click()
17   this.emailAddressTxt.type(emailId)
18   this.passwordTxt.type(password)
19   this.signInBtn.click()
20 }
21
22 public validateLoginError(errorMessage: string) {
23   this.alertBox.should('be.visible')
24   this.alertMessage.should('have.text', errorMessage)
25 }
26
27 }
28 export const loginPage: LoginPage = new LoginPage()

myAccountPage.ts
1 // <reference types="cypress" />
2
3 import { LoginPage } from './loginPage'
4
5 class MyAccountPage {
6   get signoutLink() { return cy.get('.logout') }
7   get pageHeading() { return cy.get('.page-heading') }
8
9   public validateSuccessfulLogin() {
10     this.pageHeading.should('have.text', 'My account')
11   }
12
13   public logout() {
14     this.signoutLink.click()
15   }
16
17   public validateSuccessfulLogout() {
18     loginPage.signInLink.should('be.visible')
19   }
20 }
21
22 export const myAccountPage: MyAccountPage = new MyAccountPage()

```

6. In README screen from Allure report doesn't represent actual allure report result, also no information about how we can open allure report in README.

7. In test files should be empty rows between "it" blocks, so it would be more readable

8. Pages folder should be on the same level with e2e folder
